## Sixteenth Marcel Grossmann Meeting

Contribution ID: 664

Type: Talk in the parallel session

## Probing Axion-Like Particles from the upcoming CMB experiments

Tuesday, 6 July 2021 10:54 (18 minutes)

Cosmic Microwave Background (CMB) is a powerful probe to the Universe which carries signatures of cosmic secrets over a vast range of redshifts. Along with spatial fluctuations, spectral distortions of CMB blackbody are also a rich source of cosmological information. In my talk, I will introduce a new kind of spectral distortion of CMB which can arise due to the conversion of CMB photons into Axion- Like Particles (ALPs) in the presence of an external magnetic field. This effect leads to both polarized and unpolarized spatially varying spectral distortion signals with a unique spectral shape when CMB photons undergo resonant and non-resonant conversion into ALPs in the presence of the magnetic field of the Milky Way, galaxy clusters, and voids. I will discuss the spatial structure of this distortion which can arise from Milky Way and galaxy clusters and will show its uniqueness from other known cosmo- logical and astrophysical signals using which we can probe unexplored parameter space of photon ALPs coupling.
