## Relativistic Jets from Spinning Black Holes

*Monday, July 5, 2021 4:30 PM (40 minutes)*

Many accreting black holes in Nature are observed to have relativistic jets, and it has been suggested that the jets receive much of their power from the spin energy of the central black hole. There is considerable evidence in support of this idea from computer simulations of accretion flows. The talk will review some recent progress in this field.

**Primary author:** Prof. NARAYAN, Ramesh (Harvard University)

**Presenter:** Prof. NARAYAN, Ramesh (Harvard University)

**Session Classification:** Accretion Discs and Jets

**Track Classification:** Accretion: Accretion discs and jets
