

## A roadmap in relativistic astrophysics in company of Remo Ruffini

*Monday, 16 May 2022 10:10 (40 minutes)*

Since I arrived in Italy in 2006 as a graduate student, Remo Ruffini has been a constant guide for me in relativistic astrophysics. In this talk, I recall some of the most important scientific achievements we have been engaged in together. In essence, a new way of looking at relativistic stars, a new way of looking at the gamma-ray bursts and related transient high-energy phenomena, and a new way of looking at the dark matter in the Universe.
