Spectrum of quasinormal modes of rapidly rotating Ellis-Bronnikov wormholes

Thursday, 11 July 2024 17:20 (20 minutes)

In this talk we will present the first study of the spectrum of quasinormal modes of rotating Ellis-Bronnikov wormholes. We compute the spectrum using a spectral decomposition of the metric perturbations on a numerical background. We study the dependence of the modes on the angular momentum and show that rotation breaks the triple isospectrality of the symmetric and static wormhole.
